Describe the heart of the chapter in a few words

What's the Point?

From a student reading reflection - good one-sentence answer to "what was the main point of the chapter?"

Whoever controls the search engine controls the world (or information).

There's something in this answer that most people missed.

What is it?

A Sampling of Topics from the Chapter China getting Google being sued over PageRank dropping ranking of KinderStat Page rankings and Timportance* Saling search engine rankings Search Engine Optimization (SEC) A Sampling of Topics from the Chapter China getting Google follimit search results - Government using search engine rankings - Government using search engine acceptable to control what of tizens see Congels being sued over PageRank dropping ranking of KinderStatt - Convernment using search engine acceptable to control what of tizens see Congels being sued over PageRank dropping ranking of KinderStatt - Convernment using search engine search engine the see as important by what is listed first Saling search engine controls what people see as important by what is listed first Saling search engine controls what people see as important by what is listed first Saling search engine controls what people see as important by what is listed first Saling search engine controls what people see as important by what is listed first Saling search engine controls what people see as important by what is listed first Saling search engine controls what people see as important by what is listed first Saling search engine controls what people see as important by what is listed first Saling search engine controls what people see as important by what is listed first Saling search engine controls what people see as important by what is listed first Saling search engine controls what people see as important by what is listed first Saling search engine controls what people see as important by what is listed first Saling search engine controls what people see as important by what is listed first Saling search engine controls what people see as important by what is listed first Saling search engine controls what people see as important by what is listed first Saling search engine controls what people see as important by what is listed first Saling search engine controls what people see as important by what is listed first Saling sear

Search Engine Optimization (SEO) Worth a lot of money to appear high in search engines! Question 2 Is Google (or Yahoo or Bing or) an information provider or an information broker?		
Question 2 Is Google (or Yahoo or Bing or) an information provider or an information broker?		
Is Google (or Yahoo or Bing or) an information provider or an information broker?		
Is Google (or Yahoo or Bing or) an information provider or an information broker?		
Is Google (or Yahoo or Bing or) an information provider or an information broker?		
Is Google (or Yahoo or Bing or) an information provider or an information broker?		1
Is Google (or Yahoo or Bing or) an information provider or an information broker?	Question 2	
or an information broker?	- Carotion 2	
or an information broker?	Is Google (or Yahoo or Bing or) an information provider	
(and what do these terms mean?)	or an information broker?	
	(and what do these terms mean?)	

Question 3 (and 3.5)	
What is your main objective(s) when you do a search?	
, , , ,	
What are the main objectives of a search engine company?	
what are the main objectives of a search engine company?	
Student comment: I never knew how search engines make money until reading this chapter	
	_
	٦
Question 4	-
Should government regulate how search engines "play	
favorites" in ranking search results?	
or is there such a thing as "objective criteria" for	
ranking search results?	
	7
Overting 5	
Question 5	
Compare:	
 Someone pays a search company to raise its position in search rankings 	
Someone pays an SEO firm that understands search engine's rankings to raise its position in search rankings	
5 - 2 - 3 - 3 - 3 - 3 - 3 - 3 - 3 - 3 - 3	
How do you feel about #1 ethically?	
How is #2 different?	

Understanding How Search Engines Work

Background Processing (server initiated)

- Collecting web pages (crawling the web: spiders)
- Indexing information must understand data representations!
 - O Text and HTML: Easy to extract words
 - O Doc and PDF: Not as easy, but doing better now
 - O Images (scanned documents, pictures, etc.): Hard to make sense out of!

Foreground Processing (user initiated)

- Understanding query and finding relevant pages
- Ranking relevant pages
 - o This is key! Who determines what is "most relevant"? Can make or break web-based businesses!
- Presenting to the user

Google PageRank

This algorithm is what made Google what it is

- Invented by Larry Page and Sergey Brin when graduate students at
- Now each worth about \$17.5 billion
- That's a valuable algorithm!

The PageRank Citation Ranking: Bringing Order to the Web

Information on basics is public:

Some specific tuning is not public (SEO companies would love to know this!)

How PageRank Works

Nice picture/scenario taken from Wikipedia http://en.wikipedia.org/wiki/PageRank

Basic idea:

Link structure indicates what is important (at least to web page creators)

Underlying idea: What's the probability that a random web surfer hits a page by randomly clicking links?

Key points: More likely to hit a node if linked by a likely node Don't know what's "likely" until after computing Manipulating PageRank: "Since December 2007, when it started actively penalizing sites selling paid text Google has combated link farms and other schemes designed to artificially inflate PageRank. How Google identifies link farms and other PageRank manipulation tools is among Google's trade secrets."

A different kind of search engine WolframAlpha bills itself as a "computational knowledge engine" Extracts information, not just page copies Can integrate information from different sources http://www.wolframalpha.com
